

Web Developer (HTML/JavaScript/CSS)

Overview

At PSA Parts Ltd we are expanding and recruiting for a permanent Front-End Web Developer to work in-house on our existing public web sites (PsaParts.co.uk & DuracellDirect.co.uk and with our team creating brand new sites. We are based in modern offices in Colliers Wood (SW19), close to the Northern Line tube station.

This role is ideal for a graduate who is confident with HTML, JavaScript and CSS, and is keen to improve their experience and learn new technologies. Or would suit an existing developer with a year's experience who wishes to progress. The salary will be up to 35k depending on relevant abilities.

The Role

Day-to-day the role will involve working with our developers and graphics designer to create pages for our networks of e-commerce sites, work on UX design, and help lead design and development of brand new sites. Our sites use JSP and PHP templates, and while any knowledge of PHP would be an advantage it is not a requirement.

The candidate will play a key role in a small development team, and will also have the opportunity to gain experience in all aspects of running multi-national e-commerce sites if they wish.

The candidate is expected to become proficient at JavaScript and CSS. Experience with JavaScript libraries such as jQuery, and writing mobile optimized sites would also be a benefit.

Example Projects

Several projects have been lined up, including:

- Creating new sections on an official US site for Duracell.
- Developing a brand new Health and Beauty consumer site.
- Improving the mobile UX for our payment process.

The Company

PSA Parts Ltd is an established computer components and electronics specialist selling to both trade and consumers, with a large international web presence under several brand names such as DuracellDirect.

To apply, please send your CV and covering letter to it-jobs@psaparts.co.uk

Applicants must have the right to live and work in the UK. Strictly no agencies please.
